CM 28 | INCH 11

Machinery composed by a tilling rotor, complete with blades rotating in the tractor forwarding direction and a rear hood for soil containing. The working depth can be adjusted by lateral skids, wheels, rollers or rear bed former hoods. Our rotary tillers achieve very high-level of soil tilling, even in presence of weed, cultural residues and very tough fields. Therefore, they are suitable for primary as for secondary soil preparation. The horizontal tilling rotor, available in various diameters, can fit different types of blades, in relation to the soil natural conditions and working procedures.
